✓ All images on your homepage have alt attributes.

Keywords in Title & Description

SEO analysis of the HTML page's Title and meta description content.

✓ One or more common keywords were found in the title and description of your homepage.

title: medical, school
description: medical, school

Links Ratio

SEO analysis of the ratio of internal links to external links.

There are one or more issues with the number of links on your homepage:
 Too few internal links (20) compared to the number of external links (12).

internal: 20

external: 12

Add links to external resources that are useful for your readers. Make sure you link to high-quality sites - Google penalizes pages that link to "spammy" sites (ones that break the Google webmaster guidelines).

Ideally, the links should be highly relevant to the subject you're writing about. It's impossible to cover every aspect of a subject on a single page, but your readers may be fascinated by some detail you barely touch on. If you link to a resource where they can learn more, they'll be grateful. What's more, you'll be rewarded with higher rankings!

SEO Title

SEO analysis of your site's HTML title.

✓ The title of your homepage has 25 characters which is good.

Home - UNP Medical School

Create a responsive site

Our analysis of the use of CSS media queries in your content.

✓ Your CSS code contains **media queries**.

Homepage Is Reachable

Tests if your homepage is reachable by making an HTTP request.

✓ Your homepage is reachable.

Canonical Tag

Does your content have a "canonical" URL?

✓ Your homepage is using the canonical link tag.

<https://unpmmed.com/en/>

Noindex Meta

Does your content contain a noindex robots meta tag?

...your homepage contains the `index` meta tag or header.

- ✓ Your homepage contains the `index` meta tag or header.

WWW Canonicalization

Does your site appear on more than one URL?

- ✓ Both `www` and `non-www` versions of your URL are redirected to the same site.

OpenGraph Meta

Does your site use OpenGraph meta tags?

- ✓ Opengraph meta tags have been found.

Robots.txt

Does your site have a valid robots.txt file

- ✓ Your site has a robots.txt file which includes one or more `Disallow:` directives. Make sure that you only block parts you don't want to be indexed.

Schema Meta Data

Does your content include relevant Schema.org metadata?

- ✓ Schema.org data has been found on your homepage.

Keep your content fresh

Checks for recent content updates using available signals (XML sitemap, `og:updated_time`, or Last-Modified header).

- ✓ Your content is fresh. Last updated on 2025-03-05 (0 days ago) via XML Sitemap.

Sitemaps

Does your site use an XML sitemap?

- ✓ Your site has one or more sitemaps.

Performance

Image Headers Expire

Do your images use "expires" headers?

- ✓ Your server uses **expires** header for your images.

Minify CSS

Are your CSS files properly minified?

- ✓ All CSS files appear to be minified.

Minify Javascript

Does your site use minified JavaScript?

- ✓ All Javascript files appear to be minified.

Page Objects

Analysis of the embedded objects in your pages.

- ✓ Your homepage makes 19 requests.

```
total: 19
images: 4
javascript: 2
stylesheets: 13
```

Page Size

An analysis of the size of your HTML file.

- ✗ The size of the HTML document is 62 Kb, over the average of 33 Kb and our recommendation of 50 Kb.

First, remove any unnecessary tags from your markup. This includes developer comments, which are invisible to your users - search engines ignore the text in comments, too.

Sometimes inline CSS is a culprit. A little inline CSS can help your page render faster. Too much will bloat the HTML file and **increase the page loading time**.

You can reduce CSS repetition with HTML class and ID attributes. Often the same rules will be repeated across many page elements, embedded in each tag's "style" attribute. You can extract them into a single "style" tag

and use classes and ID's to target each element.

Removing white space can have an **impact on your HTML page's size**. White space characters like carriage returns and tabs are ignored by the browser, but they make the markup easier for developers to read. So you should always **strip them from your templates or themes** before you use them in a production environment.

Response Time

How fast does your server respond to requests?

✓ Your response time is under 0.2 seconds which is great.
